KEEP IN TOUCH WITH THE FUTURE
P&G Engineering
A new challenge every day.
ENGINEERING
To lead the delivery of innovative, cost-efficient supply solutions from raw materials to the store shelf?... To design high-value machines, plants and work processes that create our products?... To use your technical knowledge and leading-edge tools to improve processes and systems, reduce costs and increase productivity?... To work on real life projects and challenges, and collaborating with multi-functional and international teams?... To join one of the most admired companies for personal development?

TAKE THE CHALLENGE IN P&G ENGINEERING at our Innovation Center in Brussels, Belgium.
Exciting! Challenging! Fulfilling! Motivating! This is how I remember my first months in P&G Engineering. Having previous professional experience as an engineer I can reassure you that P&G is the best choice you can make to build a career. On my first project I had to develop a solution to produce Liquids Dish Wash pouches. A new product where we had to ensure that there was no pouch leakage. I had to implement a solution within 3 months to meet the launch schedule while controlling the cost within 500 000 USD. With the help of R&D and Engineering we managed to implement a solution that worked. This was critical to successfully launch new Fairy/Dreft pouches across the globe.

While delivering my project, I developed deep knowledge of the pouch making technology and rapidly became a strong project manager. P&G Engineering CARES and ACTS for the professional development of its employees, I can tell you that this way my effectiveness and productivity are constantly increasing, while still keeping a good work/life balance. In this organization perspective of unlimited professional growth is surely offered, all you have to do is grab it and enjoy the journey!
Otello Barduca

I joined P&G one and half year ago and I will never forget the initial approach. From my first week I was off like a rocket. Day 2: I went to a supplier’s office to discuss a machine delivery and installation schedule. The second half of the week I was on the line in Amiens plant to get introduced to the technology, understand how plant environment works and start getting to know my French counterparts. This gave me a great understanding what P&G gives you from day 1: responsibility and ownership.

Being in P&G means combining multiple tasks at the same time. I have had the chance to work on new equipment, driving design reviews and tests with the supplier and then finally installing it in a production line. Indeed, what I love about my job is to be able to touch the product, the technology and feel what I have been working on.

“As an engineer I can reassure you that P&G is the best choice you can make to build a career.”
NEW HIRES’ STORIES

Benoit Lepoil

“A new challenge every day”, this is what I have been experiencing since I joined P&G eight months ago. It seems like it was yesterday, the time has passed so quickly! During my first weeks I travelled to Italy and France to get familiar with Liquids Packing lines for Ariel.

This was a great opportunity to meet and understand the needs of my counterparts in Operations and Site Engineering across the region. As a young Project Engineer, I quickly had the opportunity to take the initiative and I have been responsible for delivering technical solutions for launching our next new Ariel Laundry product.

I am receiving frequent coaching from my manager and continuously learn from experienced team members. In my first weeks I immediately got training on Project Management and Liquids Packing Technology and I continue to select out of the rich training portfolio P&G is offering. Working as a Project Engineer allows me getting a global picture of the projects with which I am involved and cooperating with colleagues from R&D, Planning or Operations who are located all around the world. For someone who wanted to work in an international environment and learn every day, this is an exciting life!
P&G gives you from day 1: responsibility and ownership.
Go to http://we.experiencepg.com and search for Internship or New College/University Graduates in Engineering Brussels, Belgium

**Application & Selection Process**

1. **Step 1:** Submit your application for a fulltime or an internship position. [15 min]

2. **Step 2:** Part 1: On-line questionnaire (40 min). Part 2: Reasoning Screening. [30 min]

3. **Step 3:** Reasoning test. [65 min]

4. **Step 4:** Interviews.
Go to http://we.experiencepg.com,
Click on ‘Apply Now’ in the top right corner and enter the following Job Number:
> ENG00001660

Click on ‘Apply’ and go through the Application & Selection Process.
Currently there are no open full time positions. As soon as full time positions become available, you can find them online when searching for New College/University Graduates in Belgium.
